

MOBILE MEDICAL SOLUTIONS

MFC VESSEL MODULAR FLOATING CLINIC

This 22m Modular Floating Clinic was developed to take Medical Health Solutions to the people. Due to the "Modular" design, we can outfit the vessel to perform and carry various health platforms along the inland waterways of Africa. As the entire vessel is modular, transportation is done via 40ft shipping containers or by flatbed trucks.

The MFC is ideal for applications on large bodies of water, lakes and rivers. These vessel will safely

operate in mild off-shore conditions. The high flotation, catamaran hull design needs very little horsepower to propel them efficiently while carrying high payload in shallow water. This makes the MFC ideal for operations on large inland lakes and rivers.

This vessel Can be used for a multitude of applications - mainly to assist medical teams in accessing rural populations, living around waterways.

Specifications:	
Length	22m
Beam	10m
Cargo	60 tonnes
Propulsion	2x 250Hp
Layout	8 Clinic rooms
Equipment	Bow ramp Pharmacy Fresh Water Unit Diesel Generator Custom Med Services 100pax bench for out patients
